

Model GKF 550

DISPERATOR Glass Crusher

Electric

Features

A Disperator glass crusher makes light work of handling empty bottles, jars and other glass containers by grinding them to small particles the size of sand. Most kitchens, bars and galleys have problems with the volume of waste.

Collection and transport of waste glass is time consuming because of the large volume. And floor space, which should be put to better used is occupied with a mountain of empty bottles. These problems are alleviated when a Disperator glass crusher is use.

Model: GKF 550 is easy to install in a kitchen, galley or in a garbage room.

Alternatively the glass crusher can be installed on a lower floor level near to the point of waste collection and fed with empty bottles by a tube from the bar, kitchen or galley above.

After being ground into small grains of glass with no sharp edges, an empty bottle has only 20% of it's original volume which means less storage space, less frequent collection and lower transport costs.

Specifications

| Dimensions | Millimeters (mm) |
|-------------------------|-------------------|
| Width | 365 |
| Depth | 1157 |
| Height | 1325 |
| Capacity | 600 – 1200 btl/hr |
| Rating | 1.25 kW |
| Voltage | 230V / 3ø / 50Hz |
| | 400V / 3ø / 50Hz |
| | 415V / 3ø / 50Hz |
| | 440V / 3ø / 60Hz |
| Gross/Net Weight | 119 / 99 kg |
